

misbehavior, even though Bangladesh's constitution allows no substitute for the court system. *Fatwas*, historically rulings on points of law, are being stretched to include judgments on evidence.

As a result of her work, Kamal has received numerous threats and, last year, members of a radical Islamic group threw gasoline bombs at her home.

VIETNAM'S LONELY HEARTS

Tran Thi Quy is unmarried and looking for a man who is "honest, knowledgeable and with a firm outlook". Like hundreds of other single people in Ho Chi Minh City, she has joined "Club 30", a lonely-hearts-cum-marriage group. Twice a week, members gather in cafes to discuss problems, dance, drink and, if they are lucky, pair up.

Nothing unusual in that, perhaps. As in other countries, women are discovering opportunities outside the home and are marrying later. But Quy is over 40 and Vietnam had a war. When she reached the marrying age—around 23 in Vietnam—she could not find many men of similar age. Tens of thousands of young Vietnamese were wiped out in the fighting which ended in 1975.

According to a population survey published by the government statistical office, the war left a land short of young men. Of Vietnamese aged 35 to 44, there are twice as many women as men. In addition, most of the widows aged 50 or over lost their husbands some 20-30 years ago. The proportion of widows in Vietnam is "exceptionally high"—five times greater than widowers.

The phenomenon has embedded itself into popular culture in books and films. Last week, Vietnamese television screened a tear-jerker made by the army film company about two women supporting each other 20 years after losing their men in the battle.

At the Love, Marriage and Family Affairs Consulting Center in the city, Le Minh Nga says that women had nowhere to turn to for help in the lean years after the war. With reform, things have become easier. People can afford to place advertisements in newspapers. The daring ones mingle in the singles bars that have cropped up all over town.

Most of Nga's clients are war widows who have been handicapped in the search for a husband by having to support themselves, working in factories or teaching. With an influx of foreign investment to Vietnam and higher incomes, many have more time and fewer preoccupations.

"Women are coming out and daring to talk about their lives," she says. "In the past, they wouldn't open their hearts."

SWEATSHOP BARBIE

"Appalling" describes the condition of workers at the Bangkok factory producing Barbie dolls. An article in the January-February 1997 issue of *The Humanitarist* reports on the findings of Anton Foek, who visited the Dynamics factory just outside of Bangkok where Barbies, stuffed Lion Kings and other Disney toys are made by 4,500 workers (mostly female).

Foek was greeted by women and children in a rally, carrying banners that said, "We are not

slave labor!" Most of the workers came from northeastern Thailand, where the poverty is abject and extreme. If the girls aren't sold into sexual slavery at 11 or 12, they are sent to work in big city factories to provide a steady income. It's "long hours, hard work, low pay, no vacations, no sick days, no rights. No union and thus no voice."

Many of the workers have respiratory infections caused by inhaling dust (75 percent). Others who work with lead and various chemicals suffer from chronic lead poisoning. If a worker wants to wear a mask, she can, but first she has to buy it; with a \$4 daily wage, she simply can't afford the protection. They are in "a catch-22 situation: if they don't work, their relatives get nothing; if they do work, they get sick from all the chemicals and dust."

Dr. Orapun, who is investigating the widespread illnesses and the cases of workers' deaths in Bangkok, talked to Foek. She started investigating sweatshops in 1991 as the director of Thailand's National Institute of Occupational and Environmental Medicine. First she looked into deaths from Seagate Technology, a computer hard-disk giant, with some 21,000 workers. Thai officials told her to stop but she refused to be intimidated. Shortly removed from her post, Dr. Orapun continued her investigation. By examining blood samples of workers, she has found high levels of lead poisoning. Other diseases are caused by inhalation of dust and solvents.

Foek also visited women who used to work at the factories and are now in Bangkok's hospitals. Twenty-year-old Sunanta, former Dynamics employee, said, "When we get sick, they throw us out." Most have no health insurance. Sunanta added that at least four
